

CREATING NEXT-GENERATION TECH FOR EVERY CONSUMER

TymeBoxx will be a social media app that's convenient, transparent and empowering:

THE APP USE PROCESS:

1 DATA EXTRACTION

Done via in-app request or with API key setup for multiple apps; to add several more apps later.

2 DATA MODELING

We auto-categorize your data into key content types for easy searching, ChatGPT service use and advanced analytics services.

3 OPEN ALGORITHMS

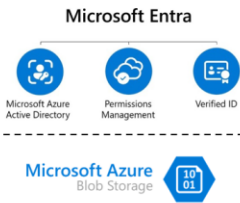

Unlike the current social media landscape, TymeBoxx will be built on 100% open-source code and algorithms that are not harmful.

6 MICROSOFT STACK

We plan to leverage the powerful stack offered by Microsoft to build this new social media platform (i.e., as an API service on the Azure Marketplace).

5 ADVANCED ANALYTICS

We will use the latest BI services (NLP/Q, KBQA, RAG, AI / ML)* to offer very advanced analytics for our users, providing them great insight across all their social media.

4 OPEN INFRASTRUCTURE

Initiated by Jack Dorsey, the AT Protocol from Blue Sky Web is meant to be a new, transparent infrastructure for social media.

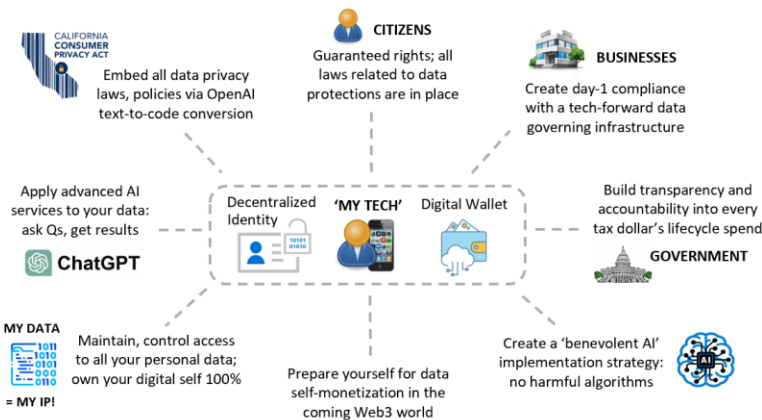

*Natural Language Processing / Querying, Knowledge-Based Q&A, Retrieval Augmented Generation, various Artificial Intelligence and Machine Learning services like anomaly detection, sentiment analytics)

DECENTRALIZED IDs AND OPEN AI: INCREDIBLE POTENTIAL

After launching the TymeBoxx app and related B2B services, we will incorporate key Web3 technologies into the platform that will be extendable into several other areas:

1 Create a Web3-ready solution that can create digital autonomy for all citizens:

2 Point these Web3 and AI capabilities to critical services in education, civics, etc.:
